PROFESSIONAL SUMMARY

Detail-oriented Data Analyst with hands-on portfolio experience turning complex datasets into actionable business insights. Proficient in Excel, SQL, Python, and Power BI, with a strong focus on Customer Behavior Analysis, HR Workforce Analytics, and Business Intelligence. Skilled in Data Cleaning, Data Validation, Data Storytelling, KPI Reporting, and Analytical Thinking to drive decision-making. Core competencies in data accuracy, recordkeeping, and reconciliation are directly transferable to inventory and stock reconciliation, sales and business reporting, and general office/administrative operations. Academic background in psychology provides a unique edge in interpreting behavioral and operational patterns and communicating clear, impactful findings to stakeholders. Completed military service and immediately available for full-time roles.

CORE COMPETENCIES

Data Analysis & Reporting • Data Accuracy & Validation • Record-Keeping & Documentation • Inventory & Stock Reconciliation (transferable) • KPI Tracking & Dashboard Design • Business & Sales Reporting • Stakeholder & Client Communication • Analytical Problem-Solving • Administrative Support & Coordination

TECHNICAL SKILLS

- Data Analysis: Microsoft Excel, Power Query, Pivot Tables, Power Pivot, Dashboard Design, Data Cleaning, Data Validation, Data Entry & Documentation
- SQL: PostgreSQL, MySQL, Joins, CTEs, Window Functions, CASE WHEN, Aggregations
- Python: Pandas, NumPy, Matplotlib, Data Visualization, Exploratory Data Analysis (EDA)
- Business Intelligence: Excel Dashboards, KPI Reporting, Business Reporting, Power BI, DAX

PROJECTS

Customer Behavior & RFM Analysis

Tools: SQL, Python (Pandas, NumPy, Matplotlib), Excel, Power Query, Power BI | Link: github.com/Ahmed1870/Custom-Behavior-RFM-Analysis

- Completed an end-to-end data analysis project based on the Online Retail Dataset (Kaggle/UCI), executing comprehensive data cleaning, data validation, and customer-level aggregation to deliver actionable business intelligence.
- Cleaned and processed more than 540,000 retail transactions to ensure data integrity and reliability.
- Calculated Recency, Frequency, and Monetary (RFM) metrics and built customer-level analytical tables using advanced SQL queries (including Joins, CTEs, CASE WHEN logic, Window Functions, and Aggregations).
- Segmented customers into actionable cohorts (Champions, Loyal Customers, Potential Loyalists, At Risk, About To Sleep, and Lost Customers) to design highly-targeted marketing efforts.
- Translated customer segments into tailored retention strategies, identifying a potential recovery of up to 15% in at-risk revenue by targeting dormant cohorts.
- Performed exploratory data analysis (EDA) using Python (Pandas, NumPy, Matplotlib) to uncover underlying purchasing patterns.
- Built an interactive Excel dashboard to monitor KPIs and track core business metrics dynamically.
- Generated business recommendations for increasing customer retention and revenue, documenting the complete workflow on GitHub.

Employee Attrition Analysis (HR Analytics)

Tools: SQL, Python (Pandas, NumPy), Power BI, DAX | Link: github.com/Ahmed1870/HRAttrition-Data-Analysis

- Analyzed a 5,000-employee HR dataset with a 15% attrition rate to uncover the workforce risk factors driving employee turnover.

- Cleaned and validated raw HR records in SQL and engineered features in Python (income quartiles, commute-distance bands, overtime flag) ahead of modeling.
- Built an interactive Power BI dashboard with DAX measures breaking attrition down by department, overtime status, income quartile, commute distance, and job role.
- Identified overtime as the strongest attrition driver (29.3% vs. 8.7%, a 3.4x gap) and flagged Executive and Analyst roles as unexpected high-risk segments.
- Delivered targeted retention recommendations — overtime caps in high-risk departments, compensation review for the lowest income quartile, and a dedicated retention track for high-risk roles.

EDUCATION

- Bachelor of Arts – Psychology — Graduated: 2024

Faculty of Arts, Fayoum University, Egypt

Relevant Coursework: Research Methods, Statistical Analysis, Behavioral Data Interpretation, Academic Report Writing

CERTIFICATIONS & TRAINING

- Google Data Analytics Professional Certificate — Google via Coursera (2024)
- Excel Skills for Business — Macquarie University via Coursera (2024)
- SQL for Data Science — UC Davis via Coursera (2024)
- Data Analysis with Python — IBM via Coursera (2024)
- Microsoft Power BI Desktop for Business Intelligence — Udemy (2024)

ADDITIONAL INFORMATION

- Languages: Arabic (Native), English (Professional Working Proficiency) • Military

Service: Completed – No obligations
